Purpose of this form

Use this form if you are a General Practitioner and would like to notify the Australian Government Department of Human Services of an individual (under 20 years of age) who has a vaccine exemption due to a medical contraindication or natural immunity.

For more information

For more information about the Australian Childhood Immunisation Register (ACIR), go to humanservices.gov.au/acir or call 1800 653 809 Monday to Friday, between 8.00 am and 5.00 pm, Australian Eastern Standard Time.

Note: Call charges apply from mobile phones.

Filling in this form

• Please use black or blue pen
• Print in BLOCK LETTERS
• Mark boxes like this ✓ or ✗

Returning your form

Check that you have answered all the questions you need to answer and that you have signed and dated this form.

Send the completed and signed form to:

Vaccines exempt due to medical contraindication

The medical basis for vaccine exemption is to be based on guidance in The Australian Immunisation Handbook. Advice on what constitutes a valid medical exemption to vaccination is provided on page 3 of this form.

6 The individual identified on this form has a:

☐ permanent vaccine exemption due to medical contraindication because of the following:

☐ previous anaphylaxis (to vaccine/vaccine component) / /

☐ significant immunocompromise (live attenuated vaccines only)

OR

☐ temporary vaccine exemption until / / due to a non-permanent contraindication because of the following:

☐ acute major medical illness

☐ significant immunocompromise of short duration (live attenuated vaccines only)

☐ the individual is pregnant (live attenuated vaccines only)

7 Select from the following vaccines: Tick ANY that apply

Live

MMR II [ ] ProQuad [ ] Varilrix [ ]

Priorix [ ] Rotarix [ ] Varivax [ ]

Priorix-Tetra [ ] RotaTeq [ ]

Inactivated

Adacel [ ] HBVax II [ ] Prevenar 13 [ ]

Antigens exempt due to natural immunity

Natural immunity to a disease is a valid exemption to vaccination for the antigens listed below. Exemption to a combination vaccine(s) on the basis of natural immunity is only valid if immunity is confirmed for all vaccine antigens. Advice on what constitutes acceptable evidence of natural immunity is provided on page 3 of this form.

8 The child has a natural immunity to:
   - Hepatitis B
   - Mumps
   - Varicella
   - Measles
   - Rubella

This has been confirmed by:
   - Laboratory testing
   - OR
   - Physician-based clinical diagnosis

Privacy notice

9 Your personal information is protected by law, including the Privacy Act 1988, and is collected by the Australian Government Department of Human Services for the assessment and administration of payments and services. This information is required to process your application or claim.

Your information may be used by the department or given to other parties for the purposes of research, investigation or where you have agreed or it is required or authorised by law.

You can get more information about the way in which the Department of Human Services will manage your personal information, including our privacy policy, at humanservices.gov.au/privacy or by requesting a copy from the department.

Provider’s declaration

10 I declare that:
   - the information I have provided in this form is complete and correct.

I understand that:

Guidelines for immunisation medical exemption

What is considered a valid medical contraindication to immunisation?

The medical basis for vaccine exemption is to be based on guidance in *The Australian Immunisation Handbook* which is available on the Immunise Australia website [immunise.health.gov.au](http://immunise.health.gov.au).

Medical contraindications include:

- anaphylaxis following a previous dose of the relevant vaccine
- anaphylaxis following any component of the relevant vaccine
- significant immunocompromise (for live attenuated vaccines only).

**Note:** For further details, including what is considered significant immunocompromise, see *The Australian Immunisation Handbook*. For example, HIV-infected persons in whom immunocompromise is mild can be given MMR and varicella vaccines.

No child should be denied the benefits of immunisation by withholding vaccines for inappropriate reasons. A comprehensive list of false contraindications to vaccination is provided in *The Australian Immunisation Handbook*.

- Egg allergy, even severe, is not necessarily a valid exemption for any vaccine routinely recommended for children.
- Presence of a chronic underlying medical condition (apart from significant immunocompromise) is not a valid vaccine exemption.

In what circumstances should a vaccine be temporarily deferred?

There are some circumstances where the administration of a vaccine should be deferred. These include:

- acute major medical condition
- significantly impaired immune function that is anticipated to be of short duration
- pregnancy (for live attenuated vaccines only).

While vaccination should be deferred in persons with acute febrile illness (current T ≥38.5°C) or other self-limiting acute systemic illness, this would usually be for short periods only and not require completion of this form. For detailed advice check *The Australian Immunisation Handbook*.

What evidence should I consider when assessing a possible natural immunity?

A previous infection is not a contraindication to immunisation against that same disease. Laboratory testing (via serology, antigen detection or polymerase chain reaction [PCR]) can reliably provide evidence of immunity to hepatitis B, varicella, measles, mumps and rubella. A physician-based clinical diagnosis is accepted although is less reliable than laboratory testing as these diseases are now uncommon among Australian children due to the widespread immunisation and other infections can have similar clinical presentations.

Who do I contact if I am uncertain whether to vaccinate or not?

Further advice can be sought from your state or territory health authority (see contact details below). In most states and territories specialist immunisation clinics exist which are equipped to assist with complex issues, such as how to manage patients who have experienced a previous adverse event following immunisation or who have an underlying medical condition.

Resources for communicating the risks and benefits of immunisation

The following resources are available to facilitate discussion on the risks and benefits of immunisation with patients and/or their carers, including those who may have concerns relating to vaccines and immunisation:

- The summary table inside the back cover of the *The Australian Immunisation Handbook* providing ‘Comparison of the effects of diseases and the side effects of NIP vaccines’
- Other resources available at [immunise.health.gov.au](http://immunise.health.gov.au)
- Vaccine preventable disease and vaccine safety factsheets prepared by the National Centre for Immunisation Research and Surveillance [ncirs.edu.au/provider-resources/ncirs-fact-sheets/](http://ncirs.edu.au/provider-resources/ncirs-fact-sheets/)
